Carbohydrates

- 1. The products of hydrolysis of lactose are: $\circ \quad \alpha \text{-galactose and } \alpha \text{-ribose}$
 - $\circ \quad \alpha\text{-fructose}$ and $\alpha\text{-galactose}$
 - o α-glucose and α-galactose
 - α-glucose and α-fructose
- 2. Starch is a polymer made from the following monomer:
 - o α-alucose
 - o β-glucose
 - o α-fructose
 - o α-galactose
- 3. Which two monosaccharides combine to form sucrose?
 - α-glucose and α-fructose
 - α-glucose and β-glucose
 - α-fructose and α-ribose
 - α-galactose and α-fructose
- 4. The type of reaction that occurs when a disaccharide is formed from two monosaccharides is
 - o condensation
 - o hydrolysis
 - o addition
 - reduction
- 5. The type of bond that forms when a disaccharide is formed from two monosaccharides is called:
 - o a peptide bond
 - o a carbohydrate bond
 - o an ester bond
 - o a glycosidic bond
- 6. Aldoses are reducing sugars because in their non-cyclic form they contain:
 - o an ester group
 - o a ketone group
 - o an hydroxyl group
 - o an aldehyde group
- 7. Which is the most important carbohydrate fuel in human cells?
 - o ribose
 - o fructose
 - o galactose
 - o glucose
- 8. Saccharides contain the following combination of elements:
 - o carbon and hydrogen
 - o carbon, oxygen and hydrogen
 - o carbon, nitrogen and hydrogen
 - o carbon, hydrogen and phosphorus
