

## **RSB Training Programme: Nature Photography**

This course will focus on the Natural World. It will help you to understand and get more from your camera to take better photographs.

### **Who is the course aimed at?**

For anyone who would like to improve their photography skills. For the course there is no need to own a professional high end camera.

### **What does the course cover?**

Whether your camera is an SLR, compact or something in between the course will help you to understand how your camera works, and cover all of the fundamentals of photography theory through practical examples and hands on exercises so that you can actually see the differences.

Starting from the ground up and working with your own camera, the course aims to quickly give you the understanding and confidence to take better photographs. We will cover camera basics, types of photography, composition, challenging situations, and the tweaks and application of theory you can do to make a real difference to your photographs.

### **Further information**

Host Mark Mallott has a BSc in zoology, an MSc in biological diversity and is currently a PhD student as well as a professional photographer. Having been an entomologist for 10 years, his passion is for the natural world and whenever possible he combines this with photography. He is Chairman of the Rothamsted Research camera club, has had several photographs published and in 2008 was selected to the 2nd round of "Photographer of the Year" by a national magazine.
